Hiring Team & Engineering Leadership

Enterprise Technology & Infrastructure Operations

RE: Enterprise Cloud, Storage & Infrastructure Solutions Engineer

Dear Hiring Team,

I am writing to express my strong enthusiasm for the Enterprise Infrastructure & Data Protection Solutions position. With over twenty years of hands-on experience designing, migrating, and operating enterprise backup, storage, and disaster recovery environments for Fortune 500 clients and government agencies, I am well-prepared to deliver immediate value to your technology roadmap.

Three specific areas where my background aligns directly with your infrastructure requirements:

- **Enterprise Backup & Storage Depth:** STS-certified on Veritas NetBackup with hands-on mastery across NetBackup, Commvault, Veeam, Rubrik, Cohesity, IBM Spectrum Protect, Dell EMC PowerProtect/VMAX, and NetApp ONTAP, maintaining 99.99%+ availability SLAs across on-premises and hybrid cloud environments.
- **Modern Cloud & Automation Architecture:** Extensive experience delivering cloud-native, automated, observability-driven infrastructure on Kubernetes, Terraform, Ansible, HashiCorp Vault, and CI/CD pipelines across AWS, Azure, GCP, and OCI.
- **Disaster Recovery & Regulatory Compliance:** Track record directing global DR failover drills, historical-recovery validation, and air-gapped immutable storage meeting strict SEC 17a-4 / WORM, HIPAA, SOC 2, and NIST retention standards.

I welcome the opportunity to discuss how my technical expertise, operational leadership, and proactive engineering approach can support your organization's infrastructure objectives. Thank you for your time and consideration.

Sincerely,

Mondip Sen
