Re: Lead Backup & Recovery Engineer (Remote) — Ferguson Enterprises

Dear Ferguson Enterprises Hiring Team,

With over twenty years of experience architecting, operating, and automating enterprise data protection and disaster recovery infrastructure, I have built a career ensuring mission-critical enterprise environments remain resilient, compliant, and rapidly recoverable. Having spent eight years leading a global data protection engineering team supporting Fortune 500 clients, I am writing to express my strong interest in the Lead Backup & Recovery Engineer role at Ferguson Enterprises.

Throughout my tenure as Global Data Protection Team Lead at IPsoft (Amelia US LLC), I directed backup and disaster recovery operations for enterprise clients including Estée Lauder and McKesson. My focus centered on validating true recoverability: conducting quarterly business-continuity audits, executing automated historical-recovery testing, and leading full multi-site failovers across NetBackup and Dell EMC Data Domain estates. When critical backup anomalies arose across complex database workloads—including Oracle RMAN, Microsoft SQL Server, Exchange, and NDMP storage—my team engineered permanent resolutions and optimized Storage Lifecycle Policies to prevent recurrence.

In my current capacity as Solutions Architect at Bell Integration, I continue to advance data protection and infrastructure automation, integrating immutable backup retention models and infrastructure as code (IaC) utilizing Terraform and Ansible across hybrid and multi-cloud environments (AWS, Azure). Key highlights I bring to Ferguson include:

- **Enterprise Platform Mastery:** Comprehensive expertise across Veritas NetBackup, Veeam Enterprise, IBM Spectrum Protect, and Dell EMC Data Domain/PowerProtect, spanning on-premises and cloud architectures.
- **Technical Leadership & Operational Rigor:** Proven success directing distributed engineering teams under Agile/Scrum methodologies, establishing standardized operating procedures, and managing vendor partnerships and client escalations.
- **Resilience & Ransomware Protection:** Deep practical experience architecting immutable storage copies, air-gapped retention, and automated DR validation to ensure rapid Recovery Time Objectives (RTO) and Recovery Point Objectives (RPO).

Ferguson's commitment to operational excellence and large-scale supply chain infrastructure requires reliable, high-availability data protection that stakeholders can depend on. I welcome the opportunity to discuss how my technical leadership and enterprise backup background can support Ferguson's infrastructure and resilience initiatives.

Sincerely, Mondip Sen
